What is the New Ageing hCG Diet program?

The New Ageing weight loss program uses hCG which unlocks abnormal stored fat reserves (hip, abdomen, thighs, etc.), allowing the body to use them for energy.

hCG is used to:

- Target storage fat areas
- Eliminate food cravings
- Re-establish weight set point
- Ensure you are comfortable

The New Ageing hCG Diet was developed in conjunction with one of the world's leading doctors in the field of weight loss. The protocol requires daily injections of hCG accompanied with a calorie restricted diet.

New Ageing hCG Diet kits contain:

- A vial of hCG
- Syringes and medicated swabs
- A proprietary blend of dietary supplements
- Multi-flora probiotics
- Digestive enzymes
- New Ageing hCG Diet manual

If the diet is followed correctly, you will truly experience mood elevation and hunger is minimal or non-existent.
